April 2018 — April 2020

Responsibilities Code Analysis of the website or web-page requirements. Troubleshoot, test and maintain the core product software and databases to ensure strong optimization and functionality. Develop and deploy new features to facilitate related procedures and tools. Develop the content based on client requirements. Communicate properly with other programmers and designers for an efficient outcome

- Organized and prioritized work to complete assignments in a timely, efficient manner.
- Worked well independently and on a team to solve problems.

Intern at Breadfast
January 2018 — March 2018

Assisting the Web Applications team with developing, enhancing, and supporting front and back-end web application, website, and supporting infrastructure.

⭐ PROJECTS

Touch Exhibition Manager

I had used PHP symfony framework and jquery datatables to build the admin panel. I used AES_ENCRYPT for Encrypting data.
Nodejs for syncing data between server and kiosks/tablets. also used Nodejs for check devices status (online/offline) to show in admin panel. I had made cron job getting data from marinetraffic.com services api to get ships location and updates using CURL.

I built this platform from scratch using following languages: - PHP symfony framework.
- Nodejs.
- Javascript.

Theqqa

This website made for cars services like (Fixing , Selling, Buying cars, Estimate used car price, Ask for any car price).
I have integrated payment using Paytabs.

Used following languages: - PHP laravel framework.
- Javascript.
